ABOUT ME

I am a front-end engineer with 3+ years of experience in web development. I have a strong foundation in HTML, CSS, JavaScript, React, and Next.js. With extensive expertise in developing visually appealing and highly functional web apps, I use Backend-as-a-Service (BaaS) platforms like Firebase & Supabase to build robust full-stack applications. I also have a background in sales, which enriches my user-centric approach in developing. My career goal is to lead teams and work on large-scale projects, continually pushing the boundaries of innovation and quality in web development.
